

# INFERNO BOILER SAFETY UNITS

Feed Water Control Valves Lowwater Alarms and Automatic Fuel Cut-Off Valves	}	Combined with Automatic Pump Governor
---	---	---

Meets A. S. M. E. Requirements

Thoroughly Tested Used the World Over

PATENT APPLIED FOR

For Drilling Boilers

For Refinery and Gasoline Plant Boilers

## INFERNO FEED WATER SAFETY UNITS

For Protection Against Explosions, and the Burning and Dropping of Crown Sheets.

### THREE POSITIVE ACTIONS!

1. The INFERNO Feed Water Control Valve Automatically controls the supply of water to the boilers and holds the water level at any desired point above the crown sheet.
2. IF for any reason the water supply should fail, and the water level falls  $\frac{1}{2}$ " below the set level, the INFERNO Lowwater Alarm automatically blows a shrill whistle calling the fireman.
3. If the whistle warning is ignored, a further drop of  $\frac{1}{2}$ " in the water level causes the INFERNO Fuel Cut-Off Valve to close, automatically cutting off the fire before any damage can be done.

AUTOMATIC ACTION FOR EFFICIENT OPERATION . . . . . POSITIVE ACTION FOR SAFETY

To depend on human action to maintain the proper water level in your boiler is taking unnecessary risks. There is only one POSITIVE WAY—the INFERNO Automatic Safety Unit Way—of maintaining the proper water level, for efficiency and safety of operations.
