

Close Hook-Up "CH" Style LG

- Close Hook-up design insures the longest possible glass length for a given vessel C-C
- LG chamber elongated to accomodate lateral ports
- Gage valves can be set closer together than a standard end connected gage, within 3/8" of the visible glass dimension, see Table
- Permits use of spherical unions

Irregularities in parallelism of upper & lower vessel nozzles can cause the vessel unions to be out of square. The two point attachment of a typical sight glass requires simultaneous squareness when making up the unions - otherwise leak at the union or excessive strain of the connector and the "connecting nipples" will result

Spherical Union Advantages:

- Minimize piping strain
- Minimize leak at union
- 1.7x stronger in bending than regular Flat Floating Union vessel connector.... more suitable for long and heavy gages

Reference Documents: EN.RT-S5, Eng. Notes
M991980, MOC

Angular misalignment often seen on horizontal vessels and field constructed piping

Corrected with use of spherical unions - as shown

Sheet: 2/4

Choice of Vessel Union Connector

3/8" inside diameter flow path

FLAT / FLOATING UNION

Linear Adjustment

Permits up to 1/4" on vessel centers (pair)

SPHERICAL UNION

Angular Adjustment

Larger section modulus "Z" than FLAT floating union connector, 1.7x stronger in bending

Recommended for angular misalignment due to non-jig set construction, vibration service, & long / heavy gages

Soft Seal: Static O'ring
Standard feature

Union Nut omitted for clarity

Primary Seal: Metal to Metal
O'ring not required

Sheet: 3/4

Center to Center Adjustment using Spherical Unions

Vessel connectors remain parallel after rotation

If required, use a soft hammer to "bump" the spherical union vessel connector into "rotated" position.

Note: the horizontal connecting axis between LG and GV permits use of spherical union, which will overcome both angular AND vessel C-C misalignment at the same time.

Gage Port Options

Minimum Gage Port C-C

Design vessel C-C distance using Table 1... where
Vessel C-C = Visible Glass (1/2 NPS), or
Vessel C-C = Visible Glass + .375" (3/4 NPS)

Extended Gage Port C-C

Factory customized to match
vessel centers

Asymmetrical Gage Port C-C
